

### Legacy is a Lew Grill Enterprise.

Lew has nearly 50 years and millions of miles of experience as a truck driver, owner operator, truck driver training instructor, truck driver training program director, safety director, consultant on USDOT/FMCSA projects, and trucking consultant for law firms, trucking fleets, trucking insurance companies, and truck driving schools.

As a litigation consultant and expert witness, Lew Grill has investigated more than 2,000 cases, has given over 1,000 depositions, and has appeared in trial nearly 200 times. (Inquire: [LewGrill.com](http://LewGrill.com).)

### About The Legacy Corporation.

The Legacy Corporation is home-based in Billings, Montana. In addition to our usual course offerings of truck driver commercial driver license (CDL), heavy equipment, and industrial safety programs for individuals, fleet, industry and government. Legacy offers unique specialized trucking courses and services for legal professionals.

### -Our Legal Professional Course is special.

Legacy offers a different approach with its truck driving course for legal professionals. We focus beyond classroom lectures. We offer a practical and hands-on experience so that you are prepared to make a difference with the trucking cases you handle on day one after completing the course.

*We are —*

- Unique in what we teach
- Different in where we teach
- Special in why we teach
- Innovative in how we teach

# LEGACY *Trucking Course for Legal Professionals*

## The Training Facility

Legacy facilities and equipment are modern, first-rate, and impressive: featuring a 27,143 sq. ft classroom, corporate office, and shop with overhead cranes, 15 truck bays, multiple classrooms with modern teaching technology, 7-acre driving range, and approximately 2-miles paved proving grounds for special training functions like skid control and recovery, stopping distances, visibility studies, and emergency maneuvers.

*"No one can speak well, unless he thoroughly understands his subject."*

— Marcus Tullius Cicero

## The Legacy Program

The program gives you a hands-on approach to the principle aspects involved in trucking cases from the CMV operator and motor carrier standpoint: for example, visibility, time and motion for turning and stopping, the "feel" of sitting behind the wheel and actually driving a truck, and more.

Experience what a truck driver can see at night with low beams vs. high beams.

Witness first hand whether a trailer with locked brakes can be drug off the road, or whether a driver can hear or feel if a set of dual wheels should unfortunately depart from his trailer.

## Experience driving the truck yourself.

Perform time and distance studies for turning, stopping, accelerating, and other maneuvers. Learn about vehicle tracking and position history of Qualcomm, Mobileye, and SafetyVision from the position of the driver and the dispatcher. We will show you what the computer captures by tracking our truck live-time.

Learn the functions of modern truck technology as we demonstrate the systems installed on our truck for collision warning, lane departure, wheel-torque monitoring, electronic logbooks, and 360° cameras. See a company's capabilities and limitations of observing remotely from an office desk the truck's speed, fault codes, fuel level, vehicle position, hours-of-service, and even a 360° live-time view around the truck while it is on the road.

See for yourself the time and distance required to make emergency stops from various speeds.
